Dear Math Circles Friends,

September 15, 2017

The Mathematics Department at Santa Fe Indian School, in partnership with the Alliance of Indigenous Math Circles, will be sponsoring a **free** Exploding Dots workshop on Saturday, September 30, 2017. This event is open to all teachers and we would like those who are interested from your school to join us from 8:00-12:00 in the MST Lecture Hall on the SFIS campus. This is in support of the Global Math Project's Global Math Week, which takes place during the week of October 10th. The Global Math Project wants every student in all grades to learn James Tanton's Exploding Dots method. Your school can be a part of this global movement. In order to teach Exploding Dots, teachers must first learn how to do the method and have some time to practice it before October 10.

The event is free and open to all. We are hoping to create excitement about the Exploding Dots method and to encourage teacher participants to include their students in the Global Math Week. Teachers will gain understanding of the method and go back to school with classroom-ready materials.

Please consider attending and do encourage your mathematics colleagues to attend this workshop by distributing the attached flyer, and have them use the link to the registration form if they would like to attend.

Thank you,

Beth Cammarata
