Sample Problems

These give a “taste” of the kinds of problems that we like at the AIMC Math Camp at Navajo Prep. You do NOT need to include solutions to these in your application. We just give these to you as gifts from us, but also to give you a sense of what kind of math we do.

Problem 1.

Three pirates were sharing a pile of gold coins. The first pirate took $\frac{3}{7}$ of all coins. The second one took 51% of the remaining coins. The third one took all the rest. It turned out that the third pirate received 8 less coins than the second one. How many coins were in the pile?

Problem 2.

Andy’s grandma placed 5 small pots in a row and poured 3 pounds of honey in the pots. The amount of honey in each pot can be the same or different and some pots can remain empty. Andy can take any two adjacent pots. What is the largest amount of honey that Andy is guaranteed to get?

Problem 3.

The inhabitants of the Island of Many Colors are colorful and intelligent lizards. Some of them always tell the truth while others always lie. Three lizards said:

A: Our island does not have any blue lizards.

B: A is a liar. He is a blue lizard himself!

C: Of course, A is a liar. But he is a red lizard.

Does the Island of Many Colors have blue lizards?
